

# Audience Behaviour Report - 2025

## Executive Summary

This report analyses viewer behaviour patterns across our platform for 2025. Key findings indicate a strong shift towards Sci-Fi content in the 18-34 demographic, increased mobile viewing, and declining comedy completion rates.

## Demographic Breakdown

\* 18-24: 22% of subscriber base - 65% prefer Sci-Fi; highest churn risk

\* 25

## Viewing Behaviour Trends

Mobile viewing increased 35% year-over-year, now accounting for 48% of all watch sessions. Smart TV remains the preferred device for premium content (avg 94% completion vs 71% mobile). Binge-watching (3+ episodes or re-watches) is most common for Sci-Fi and Thriller titles. Comedy titles show the lowest completion rates at 62% average - down from 73% in 2024. Stellar Run leads all titles with a 91% average completion rate, indicating extremely high audience satisfaction and engagement.

## City-Level Engagement

New York City continues to lead all markets with an average engagement score of 8.7/10, driven by high Premium subscription density and active social sharing. Los Angeles ranks second at 8.4/10. Tokyo shows the fastest engagement growth at +42% YoY, making it our most important emerging market. London leads European cities at 7.9/10.

## Comedy Audience Retention Issue

Comedy titles are losing audience share to short-form social video platforms. Focus groups conducted in Q3 2025 revealed that subscribers find our comedy titles 'predictable' and 'formulaic'. Key drivers of comedy disengagement: (1) over-reliance on romantic-comedy tropes, (2) lack of diverse comedy voices, (3) competition from TikTok and YouTube Shorts. Recommendation: commission original comedy from diverse writers, targeting 25-34 demographic with workplace and social satire themes.

## Recommendations for Leadership

\* Invest heavily in Stellar Run franchise - it drives the highest new subscriber acquisitions
